

20. Valid Parentheses

Easy 23.1K 1.6K ☆ ↺

Companies

Given a string `s` containing just the characters `'('`, `')'`, `'{'`, `'}'`, `'['` and `']'`, determine if the input string is valid.

An input string is valid if:

- Open brackets must be closed by the same type of brackets.
- Open brackets must be closed in the correct order.
- Every close bracket has a corresponding open bracket of the same type.

Example 1:

Input: `s = "()"`
Output: `true`

Example 2:

Input: `s = "()[]{}"`
Output: `true`

Example 3:

Input: `s = "()["`
Output: `false`

Constraints:

- `1 <= s.length <= 104`
- `s` consists of parentheses only `'()[]{}'`.

Hint 😊

```
1 char ch[10000];
2 int tp = -1;
3 void push(char c){
4     tp++;
5     ch[tp] = c;
6 }
7 char pop(){
8     char cc = ch[tp];
9     tp--;
10    return cc;
11 }
12 char top(){
13     if(tp != -1)
14         return ch[tp];
15     else return '\0';
16 }
17
18 bool isValid(char* s) {
19     tp = -1;
20     for (int i = 0; s[i] != '\0'; i++)
21     {
22         if (s[i] == '{' || s[i] == '[' || s[i] == '('){
23             push(s[i]);
24         }
25         else if (s[i] == '}' && top() == '{'
26                || s[i] == ']' && top() == '['
27                || s[i] == ')' && top() == '('){
28             pop();
29         }
30         else
31         {
32             return false;
33             return 0;
34         }
35     }
36     if (tp == -1) return true;
37     else return false;
38 }
